ARTIFICIAL HABITAT

Imitating Nature's Design

Honey Hole Dock Dropper

RECOMMENDED PLACEMENT

The Honey Hole® Dock Dropper turns your dock into a mega fish structure that attracts fish right where you want them!

Increase fish congregation by placing multiple units on your dock to create a massive, floating structure that will bring fish in for you to catch. Couple the Honey Hole® Dock Dropper with a Pond King dock mounted fish feeder to draw fish in and hold them year-round at your own private fishing spot!

Assembly Instructions

The Honey Hole® Dock Dropper should be attached to the side of your dock in a spot where the water is at least 10 feet deep. Use as two separate pieces, or hook them together for deeper habitat.

Simply shackle the cable around an attachment point, like a vertical post or dock cleat, and drop the rest into the water. The chain at the end provides the weight to sink the habitat vertically, directly beneath your attachment point.
